Art. No. 756
TRICOSAL CONBLITZ
Concrete accelerator sealing strong water leaks

Product Description
TRICOSAL CONBLITZ is an admixture in liquid form of inorganic substances with a set accelerating effects by chemical reaction, TRICOSAL CONBLITZ accelerates the setting and hardening of cement, thus stopping the backwater pressure from washing out the TRICOSAL CONBLITZ application.

Fields Of Application
TRICOSAL CONBLITZ is a bonding material for strong water leaks in basements, underground water tanks, water reservoirs, dams, etc. It is an ideal supplementary material for plugging, pouring, and for sealing and renovating old and damaged concrete, cement plaster, brick work and rock etc. It can be safely used for anchoring and calking dowels, iron parts, machinery and appliances, where rapid setting and hardening of concrete are required.

Instructions for Use
The dosage of TRICOSAL CONBLITZ should be determined according to the setting time desired. Rate of accelerating is also influenced by the quality of cement, its age of manufacture, temperature and the amount of gauging water. Low working temperature will slow down the hardening process and may required higher dosage. Dosage will also depend upon the intensity of water leaks. Full strength dose by weight of cement will be required on very wet areas. Mix TRICOSAL CONBLITZ liquid in determined quantity with gauging water and add to neat cement or sand cement in 1:1 ratio. The higher the contents of TRICOSAL CONBLITZ and neat cement, the quicker the setting and hardening of the concrete.

Add TRICOSAL CONBLITZ and water solution in quantity just sufficient to produce a stiff paste, which should immediately be applied using hand gloves to water leaks exerting a counter pressure. On wider areas apply 2 to 3 coats. The treated surface should be kept wet and cured in normal manner for 5 days.

Technical Data
Appearance: liquid
Colour: green
Specific gravity: 1.26
Ph-value: 12
Minimum working Temperature: +5 deg C
Dosage: 1 to 1.5 Ltr/bag of OPC/SRC
Storage: frost free - in well closed containers for 1 year.

Packaging
5, 10, 25 and 200 litre drums.

Health & Safety
TRICOSAL CONBLITZ is not a fire or health hazard. It is mildly alkaline. Avoid prolonged contact with the skin. Splashes to the skin should be washed with water. In case of contact with eyes immediately flush with cold water and seek medical advice.

TRICOSAL GREEN COMMITMENT
Committed to green building and sustainability with the promotion and implementation of Sustainable Building practices. We believe green buildings are not only good for environment, they also provide immediate and long-term economic benefits for developers, building owners and occupants.
